

Step-By-Step Tutorial: Enabling the Healthy Roster integration

If you need help enabling your integration please reach out to:
support@xlntbrain.raiseaticket.com.

1. Upon logging into your XLNTBrain account, select Integrations on the left navigation
2. Healthy Roster will appear to have a status of “Not Configured” when not set up, to enable select Configure Healthy Roster

Healthy Roster

Integration for sending concussion reports to the Healthy Roster platform. This integration allows secure transmission of PDF reports and patient demographic data.

Status: Not Configured

3. Review the instructions

Healthy Roster Configuration *Credentials for Xavier School for the Gifted*

[← Back to Integrations](#)

Instructions

This integration allows sending concussion reports and patient data directly to the Healthy Roster platform.

Requirements:

- You must have an active Healthy Roster account with API permissions
- You must obtain your Provider ID from Healthy Roster
- Sent reports will appear in the documents tab of the patient's profile in Healthy Roster

Important: The credentials entered here are sensitive and should not be shared. Make sure to enter the correct values.

4. Input your Provider ID as provided by Healthy Roster

Provider ID:

Your Healthy Roster Provider ID

Provider ID supplied by Healthy Roster

5. Check if desired to apply automatic synchronization with Healthy Roster

Auto Sync: Enable automatic synchronization with Healthy Roster

By enabling this option, all documents from the organization will be automatically synchronized with Healthy Roster when they are generated or modified. This will periodically run a background process to send pending documents.

6. Check to agree to the terms of the integration

Data Consent: By enabling this integration, you agree to transfer data generated on the XLNTBrain platform to Healthy Roster. If you wish to stop this from happening, please disable this integration. If you have any questions/comments, please contact us at support@xlntbrain.raiseaticket.com.

7. Select Save Configuration

Save Configuration

8. To test if your integration is active, send a test file. If you are looking to have a matched profile, be sure to include information for a fake patient with matching identifiers (First Name, Last Name, DOB)

Test Connection

You can use this form to test the connection with Healthy Roster using the configured credentials.

Note: To perform this test, you must first create or make sure the patient exists in your Healthy Roster account. Once ready, please input the first name, last name and date of birth (date of birth) to test the connection.

Test Patient:	First Name: John	Last Name: Demo	DOB: 05-13-2009
----------------------	------------------	-----------------	-----------------
